Workflows (Frontier)

Each weekday morning, review all Teams Meetings from the last 24 hours, and identify anything important I may have missed. Focus on anything that seems high priority, time-sensitive, or require action. Organize the results into three sections: Needs Response, For Your Information, and Other Important Meetings. For each meeting, include the organizer, subject, a brief summary, any due dates or deadlines, and next steps. Send to myself on Teams.

Weekday Teams Meeting Review

Last modified 30 minutes ago

Workflows > Weekday Teams Meeting Review

1. **Trigger:** Every weekday morning at 8:00 AM Central Time.
2. **Get Recent Calendar Meetings:** Retrieves all Outlook calendar meetings from the last 3 months.
3. **Summarize and Organize Meetings:** Reviews all meetings, identifies anything high priority, time-sensitive, or requiring action, and organizes them into Needs Response, For Your Information, and Other Important Meetings. For each meeting, includes organizer, subject, brief summary, due dates or deadlines, and next steps.
4. **Send Teams Summary to Myself:** Sends the organized meeting summary to you (Gina Hoffmann) in a Teams chat with Flow bot.

Assumptions made:

- Meetings are retrieved from your Outlook calendar, as direct Teams meeting retrieval is not available.
- The summary is sent to your Teams chat with Flow bot.
- The workflow runs every weekday morning at 8:00 AM Central Time.

Let me know if you want to make any changes or add more details!

AT&T

Demo scenario

Create a first-year budget for a fitness-apparel startup using 12 months of realistic, changing numbers. Include revenue and expenses like inventory, retail space, salaries, and marketing.

Add a dropdown to switch between best, average, and worst case scenarios. Include clear charts so it's easy to see how things change over the year.

In Copilot Chat

The screenshot displays the Microsoft Copilot chat interface. At the top, there are navigation elements: a back arrow, the word "Chat", a "Try Claude" button, and a Copilot icon with a close button. The main chat area has a light gray background and contains a prompt: "Create a first-year budget for a fitness-apparel startup using 12 months of realistic, changing numbers. Include revenue and expenses like inventory, retail space, salaries, marketing. Add a dropdown to switch between best, average, and worst case scenarios. Include clear charts so it's easy to see how things change over the year." Below the prompt, the Copilot logo is visible. The response section is titled "Creating chart data range" with a right-pointing chevron. The response text reads: "Setting up a contiguous chart data range for the budget table, ensuring that formulas replicate selected columns. Implementing line charts with specific series and applying formatting." At the bottom, there is a text input field with the placeholder text "Describe what you'd like to create or edit". To the left of the input field are icons for Copilot and a globe, and to the right is a green circular button.

Try Claude

expenses like inventory, retail space, salaries, marketing. Add a dropdown to switch between best, average, and worst case scenarios. Include clear charts so it's easy to see how things change over the year.

Step 4: Verify scenario dropdown impact by toggling to Best and Worst and reading Jan net income, then revert to Average. Also apply some final formatting: auto-fit columns A:N, set borders, center headers, maybe freeze panes row 17? Freeze top rows not necessary.

We'll run a tool call: Change B2 to "Best", read B18:I18; Then set to "Worst", read; Then set back to "Average"; We'll also ensure there's data validation; We'll auto-fit columns A:N via `getRange("A:N").format.autofitColumns()`; And rows maybe `getRange("1:30").format.autofitRows()`.

Let's implement.

Reasoned in 13 steps >

Step 4: Verify scenario dropdown impact by toggling to Best and Worst and reading Jan net income, then revert to Average. Also apply some

ATEA

Vibe.PowerApps

Vibe-koda fullstack-applikationer.

Byggs med ett team av agenter, bl a:

- **Requirements Agent** – tolkar och omvandlar användarens beskrivning till funktionella krav.
- **Solution Agent** - Säkerställer att alla delar (UI, data, logik) fungerar ihop.
- **Data Agent** – bygger datamodellen i Dataverse.
- **Code Agent** – genererar fullstack-kod, hanterar integrationer/API-anrop och gör appliktionen körbar.

Public preview

ATEA

Tre nedslag i Microsofts agentiska AI

Både GA och preview

Möjliggör att agenter...

- Kan koppla sig till olika system – utan att bygga integrationer.
- MCP, en växande industri-standard.

Public preview

Förenklar...

- RAG (Retrieve–Augment–Generate) är tungt.
 - Varje lösning har egna kopplingar och logik - skapar röriga och dubblerade flöden.
- Foundry IQ förenklar.
 - Skapar en gemensam kunskapsbas som alla agenter kan använda.

Frontier preview

Möjliggör att organisationer...

- Kan visualisera och säkra AI-agenter i en gemensam kontrollpanel.
- Både Microsoft- och externa agenter m.h.a öppna standarden MCP.

Data → Insikt → Automation → Agent

Summering

ATEA

Data → Insikt → Automation → Agent

Summering

- Sätten vi **interagerar med data** utvecklas snabbt...
- ...likaså **no-code**-möjligheter för alltmer avancerade lösningar
- **Agentrevolutionen** startar nu...
- ...och **förståelselagren IQ** gör utvecklingsarbetet effektivare

Utmaning: Att balansera AI-autonomi med mänsklig kontroll och governance.

About this agent

The agent scans all new users and apps added in the last 24 hours to assess their applicability to Conditional Access policies enforcing multifactor authentication, device compliance, and blocking legacy authentication and device code flow. It reviews existing enabled policies to suggest consolidations, recommends changes aligned with Zero Trust best practices, and creates new policies in report-only mode. The agent will not add new users to existing policies or turn on new policies without your approval. [Learn more about this agent.](#)

Build to fit your needs

Easily create your own agent, no coding required

Turn your idea into an agent

Create an agent that generates a comprehensive post incident report from your Defender, Purview and Sentinel incidents. It aggregates incident summaries, detailed insights, entities, alerts, and provides actionable remediation steps

Create an agent to surface recent **threat intelligence** every morning

Create an **alert triage** agent to help prioritize important alerts.

Something something about **user events** and something else related

This AI-powered feature above is currently in preview. [See terms](#) and [supplemental terms](#)

Start from scratch

Help me choose which to make

Create an agent

Create an agent to design, configure, and test custom workflows tailored to your security needs. [Learn more about agents](#)

Azure Boost: Infrastructure acceleration through offload

What is Azure Boost?

A system to offload virtualization processes traditionally performed by the hypervisor and host OS onto purpose-built hardware and software.

Highly secure, independent management of Azure hardware at scale, with no measurable impact on customer workloads.

- Isolating Azure infrastructure from host resources
- Improved servicing and maintenance process
- Improved storage and networking performance
- Hardware security and node isolation

- Några intressanta nyheter IaaS

AT&T

- Tillgänglighet/motståndskraft

Why do bad things happen?

• Tillgänglighet/motståndskraft

View zonal resiliency posture across resources and applications at scale

Obtain a **consolidated view** of zonal resiliency posture **across resources and applications**

- ➔ **Group resources** into applications using service groups based on subscription, resource group, tags
- ➔ **Assign zone resiliency** goals to your critical applications
- ➔ Quantify how many applications (and resources per application) are configured for zone resiliency
- ➔ Obtain **recommendations** for resources that are **missing critical configurations**
- ➔ Exclude resources that do not need zone resiliency and manually attest resources for which resiliency is being ensured via a custom solution

Supported services: VM, VMSS, App Services, AKS, Container Registry, SQL DB, SQL MI, PGSQL, MySQL, Cosmos DB, Load Balancer, IP Address, App Gateway, Firewall, ExpressRoute, Redis Cache, Storage Account, Service Bus

ATERA

- Tillgänglighet/motståndskraft

- Tillgänglighet/motståndskraft

Test resiliency with drills that simulate failure

Use **drill templates** to simulate a zonal outage and test resiliency of your applications

- ➔ Assign name, identities, and roles
- ➔ Auto-populate most relevant zone down faults for any resource of the application
- ➔ Easy integration with Recovery Plans to failover resources post fault injection
- ➔ Track fault injection and failover status for each resource in real-time
- ➔ Monitor application metrics in real-time
- ➔ Add notes, custom attestation and export reports to show compliance

Services supporting zone down fault testing: VM, VMSS, AKS, PostgreSQL Flex, Load Balancer, SQL DB, Container Registry, MySQL, Redis Cache

The screenshot displays the Microsoft Azure portal interface. At the top, the header bar includes the 'Microsoft Azure' logo, a search bar, and various utility icons like Copilot, notifications, and help. Below the header, the breadcrumb trail shows 'Home > swbela-mdc-vault-1'. The main heading is 'swbela-mdc-vault-1 | Properties', with a sub-label 'Recovery Services vault'. A left-hand navigation pane lists several options: Overview, Activity log, Access control (IAM), Tags, Diagnose and solve problems, Resource visualizer, Settings (expanded), Identity, Networking, Properties (selected), Locks, Getting started, Protected items (expanded), Backup items, Replicated items, Manage, and Monitoring. The main content area shows a notification banner about 'Multi-User Authorization for Backup'. Below this, several settings are listed: 'Backup Credentials' with a 'Download' link; 'Security Settings' with 'Security Level' set to 'Excellent'; 'Immutable vault' set to 'Enabled | Locked' with a 'Settings' link; 'Threat detection (Preview)' set to 'Configured' with an 'Update' link; 'Multi-User Authorization' with an 'Update' link; 'Soft Delete and security settings' with an 'Update' link; and 'Encryption Settings' with an 'Update' link.

ATERA

VAD HAR VI SETT

- ✓ Några intressanta nyheter, IaaS
- ✓ Azure Arc
- ✓ Azure Local
- ✓ Tillgänglighet/motståndskraft

VAD TAR VI MED OSS I RYGGSÄCKEN?

- ▶ • **Kontrollplanet** i Azure är nyckeln till
managring, oavsett var driften är.
- ▶ • **Det finns alternativ** till klassiska hypervisors som
även kan leverera tjänster, **inte "bara"**
gästoperativsystem.
- ▶ • **Driftsäkerhet är en teamsport** med flera skikt.
Att testa leveransförmågan gör att man kan **lita på**
kombinationen av funktioner som tillsammans
levererar tjänsten.

Tack!

/Thomas

Från hype till handling: Så gör vi skillnad

Best of Microsoft Ignite

ATERA

A woman with blonde hair and black-rimmed glasses is shown in profile, looking at a large, brightly lit subway map. Her hands are raised, gesturing towards the map. The map is a complex network of colored lines and station names, including 'Passeig de Gràcia', 'Can Jaumandreu', 'Farinera', 'l'Aranyó', 'Pere IV', 'Flu', 'Poblenou', 'Llacuna', and 'El Ma'. The lighting is soft, highlighting the woman's face and the map's details.

- Bristande linjering mellan verksamheten/affären & IT
- Utmaningar gällande datakvalitet
- Regelverk & styrning
- Experimentfokus

Det lokala perspektivet

Hur påverkar AI oss i Norden?

Ansvarsfull, säker och hållbar användning av AI

AI-pyramiden

Mognadstrappan för AI

A woman with short blonde hair, wearing a dark teal cardigan, is shown in profile from the chest up. She is looking intently at a large, vertical digital display. Her right hand is raised, with fingers slightly spread, as if she is about to touch the screen. The display shows a map of a city with various labels and a glowing white hand icon, suggesting an interactive interface. The background is dark and out of focus, showing bokeh lights from a city street at night. The overall mood is contemplative and forward-looking.

Grön innovation: Microsoft + Atea för framtiden

Best of Microsoft Ignite

ATEA

Microsoft's commitment

Koldioxidnegativt 2030

Microsoft ska vara netto-negativa i sina utsläpp senast 2030

Noll avfall 2030

Minimera allt operativt avfall och maximera återvinning

Vattenpositivt 2030

Återställa mer vatten än de förbrukar

Skydda ekosystem

Skydda mer mark än de använder till 2025

Tre centrala delar

Endpoint

Molnptimering & AI

Virtual Desktop

Windows 11: Energi & effektivitet

AI-optimerad energihantering (Windows 11)

- Smart ljusstyrka, processoptimering och look-away dimming.
- Automatisk optimering av energiförbrukningen utan att störa användaren.

Energy Saver

- Sänker energiförbrukningen och förlänger batteritiden genom att optimera bakgrundsprocesser och systemprestanda.
- Aktiveras automatiskt vid låg batterinivå men kan även styras och tvingas via policy i större miljöer.

Energirekommendationer + Koldioxidmedvetna uppdateringar

- Inbyggda förslag som hjälper användare att välja rätt energiläge och spara energi.
- Schemalägger uppdateringar när elnätet har lägre koldioxidavtryck.

ATEA

Intune: Energi & Styrning

Central energistyrning via Intune

- Styr Energy Saver, skärmtider, vilolägen och energipolicies på alla enheter.
- Ger en enhetlig och energisnål konfiguration i hela organisationen.

Resursprestanda & avvikelseanalys

- Upptäcker CPU- och RAM-spikar samt ineffektiv resursanvändning som driver onödig energikonsumtion.
- Hjälper IT att åtgärda prestandaproblem snabbt och minska energislitage.

Batterihälsorapport

- Ger Battery Health Score och visar degraderingstrender i hela enhetsflottan.
- Hjälper IT att upptäcka sviktande batterier tidigt och planera utbyten mer effektivt.

Intune & Windows

Spara energi, optimera livslängd, minska support

- **Lägre kostnader**
Mindre energiförbrukning och färre batteribytten.
- **Längre livslängd på klienter**
Bättre batterivård och optimerad energihantering.
- **Lägre utsläpp**
Minskad elförbrukning och mindre e-avfall över livscykeln.
- **Mindre drift & supportbehov**
Färre felkonfigurationer, bättre insikter och enklare central styrning.

ATEA

Tre centrala delar

Endpoint

Molnptimering & AI

Virtual Desktop

Azure Copilot: Optimeringsagent

AI-driven analys av Azure-miljön

- Identifierar åtgärder med störst effekt baserat på påverkan, kostnad och enkel implementering.
- Ger en prioriterad lista över ineffektiva resurser och förbättringsmöjligheter.
- Hjälper team att fokusera på rätt insatser direkt..

Optimering av kostnad och utsläpp

- Visar kostnads- och CO₂-besparing sida vid sida för varje rekommendation.
- Validerar förslag med evidens, användningstrender och alternativa SKU-val.
- Underlättar beslut som balanserar budget och hållbarhetsmål..

Guidade åtgärder & skalning

- Steg-för-steg-guidning och agentstyrda arbetsflöden snabbar upp genomförandet.
- Helt enkelt FinOps + Sustainability i samma motor.
